

## Price comparison

Update: 30.05.2022

### Graph of the value of gold over 20 years

The gold is a precious metal with lots of unique properties. Contrary to other metals, it is chemically very stable. Pure gold is soft but very heavy. Its density is twice the density of steel. The combination of all these characteristics has predetermined the gold as almost ideal material for the production of valuables and means of payment. In modern times, the gold has found wide use also in the industry and medicine.

### Compare the value of gold

Weight	Gold price now	Gold price 20 years ago	Profit of 20 years
1.00	144.50 €	18.71 €	125.79 €
